

Fibreglass Tapes

Manufactured from fine uniform textured filaments of high bulk glass fibre yarns. Good resistance to oils, solvents and most chemicals and are commonly used for range of insulation and high temperature sealing applications.

Temperature: Up to +550°C

Key Features:

- Extra soft, thick, and pliable.
- Excellent insulation properties.
- Inorganic, sterile and incombustible.
- Resistant to oils, solvents and most chemicals.
- Low level of leachable chlorides and fluorides.
- Low thermal conductivity.

Applications:

Suitable for use as thermal insulation to pipes, exhausts and vessels. They are also used for pre-heat insulation, oven and furnace linings, seals, gaskets and welding applications for stress relief.

Sizes:

From 0.5mm thickness to 200mm width
